Screen shot above shown using 54ward COREcommandBAR with IMC (Information Management Corporation) Mobile Software

Magnified view of the COREcommandBAR from the above screen shots

New COREcommandBAR™ eliminates the need to cycle through screens to operate all of the various devices and software in the vehicle. The user no longer needs to switch from screen to screen to operate radios, emergency lights, CAD/RMS, etc.

Regardless of what software your department uses for CAD/RMS, License Plate Lookups, Pre-Planning, Internet, etc. the 54ward COREcommandBAR remains fixed at the bottom of the computer screen at all times allowing complete control, and monitoring, of vehicle devices regardless of what application is running.

Another innovation by 54ward Integrated Solutions that keeps the driver focused on the most important part of emergency vehicle operation; Driving.
